

# FINAL RINSE

## FEATURES & BENEFITS

- Superior cleaning and degreasing
- Improves coolant performance
- Easily removes grease, dirt and oil
- Breaks down sludge

## PRODUCT DESCRIPTION

**FINAL RINSE** is a specially formulated water soluble machine tool sump cleaner. This product will cut oil and sludge and remove contaminants and fungus found in sumps and coolant lines. It will make the tough job of cleaning a machine tool easier, and prepare the machine for a fresh charge of coolant.

Designed to be added to old coolant as a final rinse before dumping and re-charging with fresh coolant. Provides a quick and easy method for cleaning machine sumps.

## APPLICATIONS

1. Remove all chips and sludge from machine.
2. Add Final Rinse to the coolant sump at 1 gallon per 50 gallons of coolant.
3. Allow to circulate for a minimum of 6 hours, and up to 24 hours before draining the sump.
4. After circulating, drain sump and remove all cleaner, old coolant, chips, dirt, and residue left behind. Wipe thoroughly with absorbent cloth. It is important to remove all remaining liquid. If too much cleaner is left in the machine, foaming or emulsification may occur.
5. Pre-mix desired coolant separately to specified dilution and recharge the machine.

## TYPICAL ANALYSIS

APPEARANCE: ..... Clear, Blue Liquid  
 WEIGHT: ..... 8.52 LB/GL  
 SPECIFIC GRAVITY: ..... 1.02  
 FLASH POINT: ..... None  
 WATER SOLUBILITY: ..... Complete

## PACKAGING

H-7410-14	1 Gal (4/Case)
H-7410-05	5 Gal Pail
H-7410-55	55 Gal Drum
