

Protecting Production Tools and Equipment.

Protecting your production
through services to clean and
refresh machines and equipment.

fluidtechs.com

Dirty, clogged and poorly maintained machines and equipment negatively impact the bottom line.

Don't let your production equipment and machine tools hold your business back or delay product manufacturing:

- Keep coolant clear of contaminants that impact production quality and output
- Extend machinery lifespan
- Prevent biological growth
- Reduce or eliminate tool or equipment breakdown

LEVEL I

- Remove coolant from sump
- Provide a minimal rinse within the machine
- Recharge system with coolant to desired concentration

LEVEL II

- Includes all Level I tasks, plus:
 - + Clean all coolant contact areas such as sump, conveyor panels, pumps and machining areas (conveyor removal as needed)
 - + Comprehensive rinse within machine
 - + Apply disinfectants, rust and bio inhibitors

LEVEL III

- Includes all Level I-II tasks, plus:
 - + External visual cleaning (includes clean/degrease of machine exterior)

LEVEL IV

- Includes all Level I-III tasks, plus:
 - + Detailed external cleaning and machine prep
 - + Professional, like-new painting

Protection.

Keeping machines, equipment and fluids at their best.

Maintain a production environment that promotes efficiency, safety, extended fluid life and performance.

360° of Machine Protection.

FST's unique, on-site services protect you from unnecessary production delays due to coolant contamination, chip interference, dirt and grime buildup and biological contaminant hazards.

360° of convenient and accessible production equipment protection.

KEEP PRODUCTION PREDICTABILITY. INCREASE OPERATOR SATISFACTION. KEEP PRODUCT QUALITY UP. ALL ARE POSSIBLE WITH CLEAN360, FROM FST.
