

SILICONE LUBE WB

FEATURES & BENEFITS

- Water based lubricant
- Mold release agent
- For rubber and plastic parts assembly
- Non-toxic
- Non-flammable

PRODUCT DESCRIPTION

SILICONE LUBE WB is a multi-purpose, water based silicone lubricant. Excellent for use as a rubber lubricant and as a mold release agent. Heavy silicone concentration provides maximum release capacity.

DIRECTIONS

Product may be sprayed, brushed or squirted. Shake or stir well before using. Apply sparingly and evenly for best results.

RUBBER LUBRICANT: When used as a rubber lubricant, it provides a temporary, wet, slippery surface that makes assembly of plastic and rubber parts fast and easy. The product will then dry to a thin protective film or be absorbed into natural or synthetic rubber.
