

CLEANING.

EQUIPCARE

Keeping machine tools at their best and lowering cost by reducing or eliminating common production problems due to unplanned maintenance and to inefficient work environments.

MACHINE CLEANING

360° OF METAL WORKING MACHINE TOOL RENEWAL.

Machine tools can make or break your production environments ability to make great products. Keeping your machines in top condition contributes to a better work environment, higher product quality and lower cost of business. Dirty equipment can lead to unplanned downtime and production interruption.

Don't let this happen to you. Keep your machinery performing at its best, all the time.

KEEP YOUR PRODUCTION ENVIRONMENT OPERATING SMOOTHLY.

Ashburn Chemical Technologies offers specialized machine cleaning services to protect your production from unnecessary delays or downtime due to coolant contamination, chip interference, dirt and grime buildup and biological contaminant hazards.

LEVEL I

- Remove coolant from sump
- Provide a minimal rinse within the machine
- Recharge system with coolant to desired concentration

LEVEL II

- Includes all Level I tasks, plus:
 - + Clean all coolant contact areas such as sump, conveyor panels, pumps and machining areas (conveyor removal as needed)
 - + Comprehensive rinse within machine
 - + Apply disinfectants, rust and bio inhibitors

LEVEL III

- Includes all Level I-II tasks, plus:
 - + External visual cleaning (includes clean/degrease of machine exterior)

LEVEL IV

- Includes all Level I-III tasks, plus:
 - + Detailed external cleaning and machine prep
 - + Professional, like-new painting

360° of Production Machine Protection that Stops Problems Before They Occur.
